From the Office of Mayor Rod Roberson

Construction has begun on the Central Green Site project and although this is an exciting undertaking for the city, we understand it means some inconvenience when it comes to parking.

After speaking with the project managers, here is some helpful information:

- This phase of the project includes utilities, earthwork, lighting, plantings, a shade garden, and a stage
- In the future, the infrastructure that is being implemented right now will allow for restrooms and a café to be constructed
- Parking is affected with approximately 35 spots lost permanently to make room for new structures
- The rest of the spots that are inaccessible at this time due to the construction equipment will become available once the project is completed
- Project completion is scheduled for June 30
- The upper level of the parking garage is open and available for use

Thank you to everyone who has reached out with questions and concerns. For additional information please contact Corinne Straight-Reed, Director of Communications for Mayor Rod Roberson. corinne.straight-reed@coei.org
